Keep Greater Milwaukee Beautiful

Tree Life Cycle

Tree Life Cycle

Keep Greater Milwaukee Beautiful

Objective: Learn about the tree life cycle and apply to trees outside

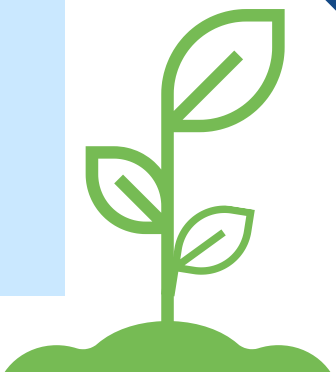
The tree life cycle has many stages. It takes a long time for trees to go from a tiny seed, to standing as tall as a house!

Because of their slow growth, trees can live a very long time, if given the right soil, weather, and habitat conditions.

The Great Basin Bristlecone Pine is the oldest living tree in existance, over 5,000 years old!

Supplies Needed

-Scissors
-Glue
-Life Cycle print out
-Fastener



Tree Life Cycle

1. Cut out each of the circles along the dotted line.

2. Lay the tree life cycle circle on top of the life stages circle. Fasten in the center with a fastener.

3. Head outside and observe the trees! Can you match each tree life stage with a tree that you see?
